SUMMARY

Computer Science graduate (completing Nov 2026, RMIT) with hands-on full-stack project experience across React, TypeScript, Node.js, SQL Server and MongoDB, native iOS development in Swift and SwiftUI, and cloud platforms including AWS and Azure, plus team-leadership experience from a management role. A fast learner, comfortable across the stack and in Agile teams, seeking a graduate software engineering role where I can contribute from day one and keep growing.

EDUCATION

Bachelor of Computer Science, Major in Enterprise Systems Development — RMIT University
Feb 2024 – Nov 2026 (expected)

Certificates in Java Programming and C/C++
2023

PROJECTS

ShiftPay — Native iOS App

2026 · Swift · SwiftUI · SwiftData · MVVM · Firebase · REST APIs

- Built an iPhone app that prices a casual hospitality shift against live Fair Work award rates, writing a pay engine that walks the shift minute by minute and opens a new segment whenever the penalty band changes — so a shift finishing at 2am is priced at the next day's rates with no special-casing. Rates are fetched from the Fair Work Commission's pay database and cached on device for offline use.
- Persisted shifts with SwiftData behind a repository protocol, encrypting each row with a Keychain-held key, implemented a custom SwiftUI Layout sizing the shift timeline proportionally to hours, and covered the award rules with 10 unit tests and 5 UI tests including midnight-crossing shifts and an accessibility audit.

Venue Vendors (VV) — Full-Stack Web Application

2026 · React TS · Node & Express · TypeORM · Cloud MS SQL Server · GraphQL · Render

- Built a multi-user (hirer / vendor / admin) venue-booking platform with a functional React TS front-end and a Node & Express + TypeORM REST API backed by a Cloud MS SQL Server database, with validation on both client and server, containerised with Docker and shipped through a GitHub Actions CI/CD pipeline.
- Developed a separate GraphQL admin dashboard with real-time notifications via GraphQL subscriptions and data-visualisation charts (bar, stacked bar, pie, line), and deployed all web services on Render.

Automated Mission Risk Assessment Engine

2026 · RMIT Capstone (Group 36) — Backend Developer | Client: Timed Automated Solutions

- Developed the backend air-risk assessment logic and integrated real-time telemetry via MQTT, aligned to CASA/SORA aviation regulations, on a React 19 / TypeScript / Vite app built in an Agile team using Git.

TECHNICAL SKILLS

Programming Languages: Java, Python, Swift, C, C++, JavaScript, TypeScript

Web & Full Stack: React, Node.js, HTML/CSS, Full Stack Development

Mobile: SwiftUI, SwiftData, MVVM, Xcode, XCTest

Databases: SQL Server, MongoDB, Database Design & Applications

DevOps & Cloud: CI/CD (GitHub Actions), Docker, docker-compose, AWS, Azure, Cloud Deployment (Render)

Software Engineering: Agile Process & Tools, Git, Software Requirements, Systems Architecture & Design

Testing: Software Testing, JUnit, XCTest, Maven, JMeter

Foundations: Data Structures & Algorithms, Foundations of AI, Cyber Security Fundamentals, Usability Engineering

EXPERIENCE

McDonald's Australia

Department Manager | Oct 2025 – Present · promoted from Crew Member (Apr 2024) through Crew Trainer, Trainee Manager and Shift Manager

- Reduced stock variance and food waste, measured by monthly stocktake results, by tightening ordering, running weekly counts and owning month-end inventory reconciliation.
- Led and developed a team of 25+, lifting crew training completion and shift readiness by coaching staff and running structured on-the-job development.
- Optimised weekly rostering for 25+ staff to keep labour cost on target, by scheduling to forecast demand and cutting avoidable overtime.
- Directed daily operations across kitchen and front counter to consistently meet speed-of-service targets, by coordinating staff and cash/EFTPOS handling across day and overnight shifts.
