15 Abroma Walk, Tarneit VIC 3029 | +61 0468 370 723 | jashanpreetsingh230106@gmail.com | github.com/Jashanpreet23

SUMMARY

Computer Science graduate (completing Nov 2026, RMIT) with hands-on full-stack project experience across React, TypeScript, Node.js, SQL Server and MongoDB, plus team-leadership experience from a management role. A fast learner, comfortable across the stack and in Agile teams, seeking a graduate software engineering role where I can contribute from day one and keep growing.

EDUCATION

Bachelor of Computer Science, Major in Enterprise Systems Development — RMIT University

Feb 2024 – Nov 2026 (expected)

Certificates in Java Programming and C/C++

2023

PROJECTS

Venue Vendors (VV) — Full-Stack Web Application

2026 · React TS · Node & Express · TypeORM · Cloud MS SQL Server · GraphQL · Render

- Built a multi-user (hirer / vendor / admin) venue-booking platform with a functional React TS front-end and a Node & Express + TypeORM REST API backed by a Cloud MS SQL Server database, with validation on both client and server.
- Developed a separate GraphQL admin dashboard with real-time notifications via GraphQL subscriptions and data-visualisation charts (bar, stacked bar, pie, line), and deployed all web services on Render.
- Set up a CI/CD pipeline with GitHub Actions (type-check, build and test on every push) and containerised the app with Docker and docker-compose for consistent, reproducible deployment.

Automated Mission Risk Assessment Engine

2026 · RMIT Capstone (Group 36) — Backend Developer | Client: Timed Automated Solutions

- Built a full-stack web app to assess drone-operation risk, using React 19, TypeScript and Vite with Jotai state management, MUI, Recharts and Leaflet.
- Developed the backend air-risk assessment logic and integrated real-time telemetry via MQTT, aligned to CASA/SORA aviation regulations, in an Agile team using Git.

Myki Transit Database System

2026 · SQL Server — Database Design & Development

- Designed the ER model and relational schema with monthly table partitioning, and implemented touchOn/touchOff stored procedures in T-SQL with full test cases for fare validation.

AirBnB Data Model & Node.js Web Application

2026 · MongoDB (Atlas) & Node.js — Full Stack

- Modelled real AirBnB data in MongoDB using a hybrid embedded/referenced design, and built a Node.js web application with booking availability-checking logic on top of it.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, JavaScript, TypeScript

Web & Full Stack: React, Node.js, HTML/CSS, Full Stack Development

Databases: SQL Server, MongoDB, Database Design & Applications

DevOps & Cloud: CI/CD (GitHub Actions), Docker, docker-compose, Cloud Deployment (Render)

Software Engineering: Agile Process & Tools, Git, Software Requirements, Systems Architecture & Design

Testing: Software Testing, JUnit, Maven, JMeter

Algorithms & AI: Data Structures & Algorithms, Foundations of AI

Security & Mobile: Cyber Security Fundamentals, iOS Software Engineering, Usability Engineering

Tools: Microsoft Word, Excel, PowerPoint

EXPERIENCE

McDonald's Australia

Department Manager | March 2024 – Present

- Reduced stock variance and food waste, measured by monthly stocktake results, by tightening ordering, running weekly counts and owning month-end inventory reconciliation.
- Led and developed a team of 25+, lifting crew training completion and shift readiness by coaching staff and running structured on-the-job development.
- Optimised weekly rostering for 25+ staff to keep labour cost on target, by scheduling to forecast demand and cutting avoidable overtime.
- Directed daily operations across kitchen and front counter to consistently meet speed-of-service targets, by coordinating staff and cash/EFTPOS handling across day and overnight shifts.
